Course Name : Programming Fundamentals

Co-ordinator Name : Prof. K.K. Solanke   **Duration : 30 Hrs.**

About this Course :

Programming is an increasingly important skill, whether you aspire to a career in software development, or in other fields. This course is the first in the specialization Introduction to Programming in C, but its lessons extend to any language you might want to learn. This is because programming is fundamentally about figuring out how to solve a class of problems and writing the algorithm, a clear set of steps to solve any problem in its class. This course will introduce you to a powerful problem-solving process — the Seven Steps — which you can use to solve any programming problem. In this course, you will learn how to develop an algorithm, then progress to reading code and understanding how programming concepts relate to algorithms.

Syllabus- What you will Learn from this course

WEEK 1

Introduction - This module introduces a powerful process for solving any programming problem—the Seven Steps. You will learn how to approach a programming problem methodically, so you can formulate an algorithm that is specific and correct. You will work through examples with sequences of numbers and graphical patterns to develop the skill of algorithm development.

Lectures : Why you should learn to programs, Stepping through an algorithm, Testing an algorithm for a Numerical Sequence, A Pattern Squares, Testing a Pattern of Squares, Drawing a Rectangle.

Closest Point, Generalizing Closets Point.

Reading :
Programming: Plan First, Then Code Overview of the Seven Steps Algorithms
Step 1: Work an Example Yourself   Step 2: Write Down What You Just Did
Step 3: Generalize Your Steps   Step 4: Test Your Algorithm
A Pattern of Squares
Next Steps

Practice Exercises : Steps, Algorithm Practice, Algorithms

WEEK 2

Reading Code - In this module, you will learn to read code this means you will be able to execute a piece of code by hand, and clearly illustrate what each statement does and what the state of the program is. Understanding how to read code is the only way to be sure you can write correct code. By the end of this module, you will be able to read and understand code with functions, conditional statements, iteration, and other fundamental techniques.

Lectures : Why You Should Learn to Read Code, Declaring and Assigning a Variable, Examples of Expressions, Using Functions for Abstraction, Execution of Function Calls, Printing Example, Execution of If, Execution of Switch/Case, While Loops, Equivalent For and While Loops, Execution of Nested Loops, Execution of Continue

Date. 14/01/2019

Course Name : Programming Fundamentals

| Co-ordinator Name : Prof. K.K. Solanke | Duration : 30 Hrs. |

Reading :
Declaring a Variable, Assigning a Variable, Expressions with Common Operators, Anatomy of a Function, How to Evaluate a Function, Scope, Printing, Conditional Statements, If/Else, Switch/Case, Shorthand, Loops for Repetition, While Loops, Do/While Loops, For Loops, Continue and Break, Higher-level Meaning

Practice exercises :
Variables and Expressions, Functions, Printing, Logical Operators, Conditional Statements, While Loops, Loops, Reading Code

WEEK 3 :

Types-Everything is a number to a computer, but types determine the size and interpretation of numbers. In this module you will learn about types beyond integers, both their conceptual representations, and their hardware representations in binary. You will learn basic data types, "non-number" types, and complex, custom types, as well as some important caveats, so you will avoid type-related programming mistakes.

Lectures : Introduction to Types, Types and Formatted Output, Type Conversion, Everything Is a Number, Struct for a Rectangle, Uses of Typedef, Enumerated Types, A Duke Software Engineering Student on the Importance of Planning

18 readings : Converting between Decimal and Binary, Looking under the Hood, Basic Data Types, char, int float and double, Printing redux, Expressions Have Types, Type Conversion, Casting, Overflow and Underflow, "Non-numbers", Strings, Images, Sound and Video, Structs, Typedef, Enumerated Types

Practice exercises : Decimal, Hex, and Binary, Basic Data Types, Expressions Have Types, "Non-numbers", Complex, Custom Data Types, Types

WEEK 4 : Project -You have learned a lot about designing algorithms and the programming concepts that will help you implement them. For this project, you will develop and test your own algorithm for sorting data. This module will reinforce the importance of being specific when you write an algorithm and provide an opportunity for you to do so yourself, for a very common computational task: sorting.
Importance of Writing a Specific Algorithm
Introduction to Sorting

Reading : Sample PB&J Algorithm with Feedback

Practice : Writing a Sorting Algorithm

Course Description :

The purpose of this course is to enable the students to acquire a general knowledge about the "event management" and to become familiar with management techniques and strategies required for successful planning, promotion, implementation and evaluation of special events with a special focus on case studies of the events.

Expected Student Outcomes :
1. To acquire an understanding of the role and purpose(s) of special events in the organizations.
2. To acquire an understanding of the techniques and strategies required to plan successful special events.
3. To acquire the knowledge and competencies required to promote, implement and conduct special events.
4. To acquire the knowledge and competencies required to assess the quality and success of special events.

About classroom participation :

While the grade cannot be based on attendance *per se*, students should plan to be in class and ready to discuss the readings/ lectures. Students will be divided into small discussion groups at the beginning of the term, and topics for presentation will be assigned to each of group members.

CLASS SCHEDULE

Lecture 1: Principles of project/Event Management: From concept to reality (5)
Understanding project management - resources - activities - risk management - delegation - project selection - role of the Event Manager.

Lecture 2: Preparing a proposal (5)
Conducting market research - establishing viability - capacities - costs and facilities - plans - timescales - contracts.
Clarity - analysis - estimating attendance - media coverage - advertising - budget - special considerations - evaluating success.

Lecture 3: Crisis Management plan (5)
Crisis planning - prevention - preparation - provision - action phase - handling negative publicity - structuring the plan.

Lecture 4: Seeking sponsors (5)
Different types of sponsorship - definition - objectives - target market - budget - strategic development - implementation - evaluation.

Lecture 5: Organizing the event (5)
Purpose - venue - timing - guest list - invitations - food & drink - room dressing - equipment - guest of honor - speakers - media - photographers - podium - exhibition.

Lecture 6: Marketing tools
Types of advertising - merchandising - give a ways - competitions - promotions - website and text messaging.

Lecture 7: Media tools (5)
Media invitations - photo-calls - press releases - TV opportunities - radio interviews.

PERSONALITY DEVELOPMENT

Coordinator Name: D.E. Suradkar

Hours-35hr

Objectives:

Personal development goals are objectives you set to **improve your character, skills and capabilities.** Setting these goals involves assessing yourself and identifying the areas in which you can improve to maximize your potential. To get started with personal development, you should create a plan with actionable steps.

Syllabus Content:

UNIT I INTRODUCTION TO PERSONALITY DEVELOPMENT   (7)

The concept personality- Dimensions of theories of Freud & Erickson- personality – significant ofpersonality development. The concept of success and failure: What is success? - Hurdles in achievingsuccess - Overcoming hurdles - Factors responsible for success – What is failure - Causes of failure. SWOTanalyses.

UNIT II ATTITUDE & MOTIVATION   (10)

Attitude - Concept - Significance - Factors affecting attitudes - Positive attitude - Advantages – Negativeattitude - Disadvantages - Ways to develop positive attitude - Difference between personalities havingpositive and negative attitude. Concept of motivation - Significance - Internal and external motives -Importance of self-motivation- Factors leading to de-motivation

UNIT III SELF MANAGEMENT   (10)

Understanding of life story- Focusing on Internal narratives- Managing change, confusion and uncertainty-Sharpening the Intellect-Schooling the mind- Socializing the individual

Unit IV: ACADEMIC COPING STRATEGIES   (8)

Memory- Art of listening- Note making-Seminar presentation- Art of learning and writing guidelines- How to study.

Programming Fundamentals

Language English   **Duration 30 Hours**

Co-ordinator Name: Asst. Prof. K.K. Solanke
Sagar BCA College Devmurti, Jalna

About thisCourse

Programming is an increasingly important skill, whether you aspire to a career in software development, or in other fields. This course is the first in the specialization Introduction to Programming in C, but its lessons extend to any language you might want to learn. This is because programming is fundamentally about figuring out how to solve a class of problems and writing the algorithm, a clear set of steps to solve any problem in its class. This course will introduce you to a powerful problem-solving process—the Seven Steps—which you can use to solve any programming problem. In this course, you will learn how to develop an algorithm, then progress to reading code and understanding how programming concepts relate to algorithms.

Syllabus- What you will Learn from this course

WEEK 1

Introduction - This module introduces a powerful process for solving any programming problem—the Seven Steps. You will learn how to approach a programming problem methodically, so you can formulate an algorithm that is specific and correct. You will work through examples with sequences of numbers and graphical patterns to develop the skill of algorithm development.

Lectures
Why you should learn to programs,
Stepping through an algorithm,
Testing an algorithm for a Numerical Sequence,
A Pattern Squares,
Testing a Pattern of Squares,
Drawing a Rectangle,

WEEK 2

Reading Code - In this module, you will learn to read code this means you will be able to execute a piece of code by hand, and clearly illustrate what each statement does and what the state of the program is. Understanding how to read code is the only way to be sure you can write correct code. By the end of this module, you will be able to read and understand code with functions, conditional statements, iteration, and other fundamental techniques.

Lectures

WEEK 3

Types-Everything is a number to a computer, but types determine the size and interpretation of numbers. In this module you will learn about types beyond integers, both their conceptual representations, and their hardware representations in binary. You will learn basic data types, "non-number" types, and complex, custom types, as well as some important caveats, so you will avoid type-related programming mistakes.

Project -You have learned a lot about designing algorithms and the programming concepts that will help you implement them. For this project, you will develop and test your own algorithm for sorting data. This module will reinforce the importance of being specific when you write an algorithm and provide an opportunity for you to do so yourself, for a very common computational task: sorting.
